1. About This Manual

This manual explains how to carry out the day-to-day tasks in Apex POB — the Personnel On Board (POB) management system used at Marconi.ng EPC Limited. It is written for the people who use the system every shift: security officers, reception, HSE officers and their supervisors.

"POB" (Personnel On Board) means everyone who is currently on site / on the platform. Apex POB tracks who is on board in real time, manages visitors, runs emergency musters and drills, records attendance, and produces the reports safety and operations teams need.

What this guide covers

- Signing in and getting around the system
- Reading the Dashboard and POB Status
- Managing visitors (pre-registration, host approval, check-in/out, blacklist)
- Emergency response and mustering (drills, headcount, missing persons)
- Attendance and running Reports

Please note: What you can see and do depends on the role your administrator has given you. If a module described here does not appear in your menu, you may not have permission for it — that is normal. Contact your system administrator if you need access.

2. Getting Started

2.1 Signing in

Open your web browser (Chrome or Edge recommended) and go to:

<https://marconi-apexpob.tekktopia.com>

1. Type your Username.
2. Type your Password (use the eye icon to reveal it if needed).
3. Tick "Keep me signed in" if you are on your own trusted computer.
4. Click Sign In.

Figure 1. The Apex POB sign-in screen.

If your administrator has enabled two-factor authentication (2FA) for your account, you will also be asked for a 6-digit code from your authenticator app after your password.

Forgot your password? Click "Forgot password?" on the login screen and follow the instructions, or ask your administrator to reset it.

Trouble logging in? If the page loads but sign-in fails, first try a hard refresh (Ctrl+Shift+R, or Cmd+Shift+R on Mac). If it still fails, confirm you are using the correct web address and contact your administrator — the address you use may need to be authorised on the server.

2.2 Finding your way around

After signing in you land on the Dashboard. The menu on the left is grouped so you can find things quickly:

Menu group	What you'll find there
OVERVIEW	Dashboard, POB Status
HUMAN RESOURCES	Personnel, Payroll
OPERATIONS	Attendance, Zones, Transport Manifest, Emergency & Mustering, MTD
SECURITY	Access Control, Devices, Visitor
ADMIN	Meeting, Reports, Settings

Along the top of every screen you will find:

- **Search** — quickly find a person, visitor or record.
- **Notifications (bell)** — live alerts such as approvals needed, emergencies and visitor overstays.
- **Your profile** — view your profile, switch light/dark mode, and sign out.

2.3 Signing out

Always sign out when you leave a shared workstation: click your profile (top right) and choose Logout.

3. The Dashboard (Operations Overview)

The Dashboard is your live, at-a-glance picture of the site. The tiles refresh automatically.

Figure 2. The Operations Overview dashboard — live headcount, activity, reader status and compliance.

The most useful tiles for daily operations are:

- **Net On-Site Today** — the running headcount (entries minus exits) for the day.
- **Zone Occupancy** — live headcount for each zone.
- **Personnel by Location** — how people are distributed across sites.
- **Today's Activity** — entries and exits through the day, hour by hour.
- **Live Activity** — the most recent badge/reader events as they happen.

- **Attendance Trend** — check-ins vs check-outs over the last 30 days.
- **Reader Status** — which access readers/devices are online.
- **Workforce Compliance** — medical, certificate and PPE readiness at a glance.
- **Emergency & Safety** — shows immediately if any emergency, lockdown or fire mode is active.

Click a tile title to jump straight into the related module (for example, Attendance or Zones) for the full detail.

4. POB Status — Who Is On Board

POB Status (under OVERVIEW) answers the key safety question: exactly who is on site right now, and where. Use it during handovers, spot checks and whenever operations asks for the current headcount.

Figure 3. The POB Status screen — total on board, distribution, locations and departments.

What you see

- **POB Distribution** — the total on-board count and how it splits (e.g. offshore / onshore).
- **Locations** — headcount by location/site.
- **Department Breakdown** — on-board count by department.
- **Live Activity (Last 24h)** — the most recent movements.
- **Attendance Trend** — check-ins vs check-outs over your chosen window (7 / 14 / 30 days).

Everyday tasks

- **Filter** — narrow the view by Location or Department using the filters at the top.
- **Find a person** — use the search box to check whether a specific person is on board.
- **Export** — click Export to download the current POB list as a CSV file (for manifests or email).

Reading movements: Each movement is a "punch" — Check In, Check Out, Break Out or Break In. The on-board count is entries minus exits, so a person on Break Out is temporarily counted as off-site until they Break In.

5. Visitor Management

The Visitor module (under SECURITY) covers the whole visitor lifecycle: pre-registration, host approval, check-in and check-out, on-site monitoring, and the blacklist. Across the top you'll see live counters: Total Visitors, On Site, Pending Approval, Today's Check-ins, Overstay and Blacklisted. The work is organised into tabs.

Figure 4. The Visitor Management screen, with live counters and the workflow tabs.

5.1 Pre-registering a visitor

Pre-registration lets you book a visitor in advance so their arrival is quick and their host is notified.

5. Open the Pre-Registration tab and start a new pre-registration.

6. Enter the visitor's details: full name, company, phone/email, and ID.
7. Choose the Host (the employee they are visiting) and the visit date and time window.
8. Enter the Purpose of visit, and vehicle number if they are driving in.
9. Tick Contractor and Safety Induction where they apply.
10. Save. The system creates a QR code and emails the host (to approve) and the visitor (their confirmation and QR).

5.2 Approving or rejecting visitors (Host Approval)

The Host Approval tab lists pre-registrations awaiting a decision. This is where the security desk or the host confirms who is allowed on site.

Figure 5. The Host Approval tab — search, filter by status, and approve, reject or resend.

- **Approve / Reject one** — use the green tick or red cross on a row; you can add a note.
- **Bulk approve / reject** — tick several rows, then use "Approve all" or "Reject all" in the blue bar. Each visitor is handled individually, so if one fails (e.g. blacklisted) the rest still go through.
- **Resend** — the envelope icon re-sends the notification email (host request, or the approval/rejection outcome).
- **Details** — click a visitor to open the side panel with the full visit, host, purpose and safety induction details.
- **Search & filter** — search by visitor, company, host or purpose, and filter by status.

Safety rule: A blacklisted visitor cannot be approved — the Approve button is disabled and the row is

flagged. Remove them from the Blacklist first (with proper authorisation) if approval is genuinely required.

Status labels you'll see: Pending, Approved, Rejected, Checked In, Checked Out, Expired.

5.3 Checking a visitor in and out

- **Check-In tab** — scan the visitor's QR code (from their confirmation) or find their pre-registration to check them in. Walk-in visitors with no booking can be registered and checked in here.
- **Check-Out tab** — check the visitor out when they leave, which removes them from the on-site count.

5.4 On-Site Monitor

The On-Site Monitor tab shows every visitor currently on site. Watch the Overstay flag — it highlights visitors who have stayed beyond their booked window so you can follow up.

5.5 Blacklist

The Blacklist tab holds visitors who must not be admitted. Blacklisted people are blocked from approval and flagged on check-in. Add or remove entries only with the proper authorisation.

5.6 Visit records and reports

The Visit Records tab is the searchable history of every visit. The Visitor Reports and Analytics tabs summarise visitor traffic over time.

6. Emergency & Mustering

Open Emergency & Mustering (under OPERATIONS) during drills and real incidents. It combines live emergency controls with the muster (headcount) process. The screen is split into Emergency Response tabs and Mustering tabs.

Figure 6. The Emergency & Mustering command screen — emergency actions and live status.

6.1 Mustering — accounting for everyone

- **Overview** — the POB summary and whether any muster/drill is currently in progress.
- **Live Events** — start and run a muster event; track the live headcount as people are accounted for.
- **Zone Map** — a spatial view of the headcount in each zone.
- **Mobile Check-in** — lets people check in at a muster point by scanning a QR code (useful on handheld devices).

Running a muster

11. In Live Events, start a new event and choose the type: Real Emergency or Drill.
12. As people report to muster points, the headcount updates live — showing who is accounted for and who is still unaccounted.
13. Work the Missing Personnel list until everyone is accounted for.
14. End the event when complete. The compliance figures are saved for the report.

Missing persons and search sweeps

Anyone not yet accounted for appears on the Missing Personnel panel, with an escalating status: Missing → Alert → Search Ordered → Critical, along with how long they have been missing.

- **Order a search** — assign a search sweep for a missing person.
- **Mark Safe / Found** — **Safe** — update a person once they are located and confirmed safe; the headcount adjusts immediately.

Drill vs real: Always confirm whether you are running a Drill or a Real Emergency before you start — it is recorded on the event and in the compliance reports.

6.2 Emergency response controls

The Emergency Response tabs are for authorised responders. They are live safety controls — use them only under your site's emergency procedures.

Tab	What it does
Dashboard	Live emergency status across the site
Lockdown	Restrict access (access control response)
Fire Mode	Evacuation mode
Notifications	Send mass alerts to personnel
Devices	Sirens and relays
Triggers	Panic buttons and automation
Plans	Emergency procedures and plans
Audit Trail	Full history of emergency events and actions

Caution: Lockdown, Fire Mode and Triggers take real effect on doors, sirens and alerts. Only activate them when your emergency procedure calls for it. Every action is recorded in the Audit Trail.

7. Attendance

The Attendance module (under OPERATIONS) records who was in and out and when. For daily operations the most used tabs are:

Figure 7. The Attendance screen, showing transactions and timesheets.

- **Transactions** — the raw stream of badge/reader punches (in, out, break).
- **Timesheet** — per person daily hours built from those punches.
- **By Area** — attendance grouped by area.
- **Manual Logs** — add a punch a reader missed (e.g. a faulty badge), with a reason.
- **Exceptions** — anomalies to review, such as a missing check-out.
- **Overtime** — overtime hours recorded against the rules.

Adding a missed punch: open Manual Logs, choose the employee, set the correct date/time and punch type (In/Out), add a note explaining why, and save. It then appears in their timesheet.

The remaining tabs (Shifts, Schedules, Timetables, Holidays, Leave Types, Leaves, Overtime Rules) are configuration usually handled by HR/administrators.

8. Reports

The Reports module (under ADMIN) turns the live data into documents you can save, print or email. Running a report is the same every time:

Figure 8. The Reports screen — choose a report, set filters, then export to PDF, CSV or Excel.

15. Open Reports and pick a report from the category list.
16. Set the filters (usually a date range, and sometimes location, department or company).
17. Generate the report to preview it on screen.
18. Export it to PDF, CSV or Excel to download.

You can mark reports as Favourites, and your Recent reports are kept for quick access. The Custom Builder lets advanced users build a tailored report.

Reports you'll use most

Category	Reports
POB Operations	Daily Manifest · Crew Change · Rotation Overdue · Zone Occupancy History · Headcount by Company
Attendance	Daily Attendance · Monthly Summary · Attendance Summary · Leave · Exceptions
Mustering	Event Report · Drill Log · Headcount Timeline · Missing Persons · Compliance % · Zone Performance

Tip: The POB Operations → Daily Manifest is the "who is on the platform right now" report — the one most often requested for handovers and by operations.

9. Other Modules (Reference)

Beyond the core daily operations screens, Apex POB includes several modules used mainly by HR, security and system administrators. This chapter is a short orientation to each — what you can open depends on your role.

9.1 Personnel

Personnel (under HUMAN RESOURCES) holds the employee master records and the HR processes attached to them. The sub menu includes Employees, Leave Management, Training, Performance, Disciplinary, Promotion/Transfer, Contracts, Benefits, Departments, Positions, Onboarding and Contractor/Vendor.

EMPLOYEE	ORGANIZATION	TYPE	STATUS	POB	BIOMETRICS	MTD
SA Smith Akinwalere EMP0022 smith@netfinity.ng	Netcom Africa NOC - Manager	STAFF	ACTIVE	OFF	FP Face Card	
S Shakirat 184	Service Delivery	STAFF	ACTIVE	OFF	FP Face Card	
S Sean 238		STAFF	ACTIVE	OFF	FP Face Card	
SE Samson Efemedala EMP040 samson@gmail.com	Netcom Africa Supply Chain - Engineer Depart...	STAFF	ACTIVE	OFF	FP Face Card	
SE Samuel Efemena EMP039	Netfinity Netcom Support - Engineer Dep...	STAFF	ACTIVE	ON	FP Face Card	
RH Ruben Hawa 2 geremoses112@g...	Mxtech CORE Network	STAFF	ACTIVE	OFF	FP Face Card	
QA Qiji Akinwalere 38 akinwalere@gmail...	Netcom Africa	STAFF	ACTIVE	ON	FP Face Card	

Figure 9. The Personnel (Employees) directory.

- **Employees** — search, view and maintain each person's record, department, position and status.
- **Contractor/Vendor** — manage third party personnel who are on site under a contract.
- **Leave, Training, Performance, Disciplinary** — the HR processes recorded against each employee.

9.2 Payroll

Payroll (under HUMAN RESOURCES) runs the Nigerian statutory payroll on top of attendance. The tabs across the top take you through the full cycle.

Figure 10. Payroll Management — salary structures, pay periods, statutory and payslips.

- **Salary Structures & Formula Lab** — define pay items and how they are calculated.
- **Pay Periods & Calculation** — open a period and run the payroll.
- **Statutory (NG)** — PAYE, pension and other statutory deductions.
- **Payslips & Bank Sheet** — produce payslips and the bank payment sheet.

Note: Payroll figures are sensitive — only run or approve payroll if that is part of your role, following your finance team's approval process.

9.3 Access Control

Access Control (under SECURITY) manages the physical doors and access panels (inBio/C3 controllers). Its dashboard shows live door status and lets authorised operators respond.

Figure 11. The Access Control dashboard — live door status and controls.

- **Door status & Remote Open** — see which doors are online or offline, and open a door remotely when authorised.
- **Lock All / Unlock All** — site-wide door controls for emergencies.
- **Access Levels, User Levels & Time Zones** — who may pass through which doors, and when.
- **Controllers & Doors** — configure the panels and the doors.
- **Guard Tour** — set up and monitor guard patrol checkpoints.

Caution: Lock All, Unlock All and Remote Open act on real doors — use them only under your security procedure.

9.4 Devices

Devices (under SECURITY) is where the ZKTeco readers and biometric terminals are managed and monitored.

Device Management

Manage and monitor all devices in the system

Total Devices: 3
 Online Devices: 1
 Offline Devices: 2
 By Type: 2

Search by SN or alias:

Filter by Area: Filter by Purpose: Filter by S...:

Status	Device	Purpose	IP Address	Connection	Purpose / Location	Users	Biometrics	Last Active	Sync Status
ONLINE	0583141700769 ZKTeco-192.168.102.249	T&A	192.168.102.249	Direct	T&A Abuja Area	0 users	0 FP 0 Face	06/07/2026, 22:57:42 Just now	Syncing 10s ago
OFFLINE	0583141700724 ZKTeco-192.168.102.206	T&A ZEM760_TFT	192.168.102.206	Direct	T&A Ogun State Zone	0 users	0 FP 0 Face	02/07/2026, 09:48:11 4d ago	Offline Last seen 5d ago
	3399162301847		192.168		T&A			25/06/2026,	Offline

Figure 12. Device Management — reader status, sync and enrollment.

- **Device list** — online/offline status, IP, purpose, users, biometrics and sync status for each reader.
- **Add Device / Auto-Detect / Import CSV** — bring new readers into the system.
- **Real-time Monitor** — watch live punches as they happen.
- **Biometric Enrollment** — enrol fingerprints and faces.
- **Maintenance & Firmware** — housekeeping and firmware updates.

9.5 Settings

Settings (under ADMIN) is the system administrator's area for users, roles and company configuration.

Figure 13. System Settings — users, roles and configuration.

- **Users** — create accounts, assign roles, activate or deactivate people and reset access.
- **Roles & Permissions** — control what each role can see and do — this is what shows or hides modules.
- **Security** — password and two-factor (2FA) policy.
- **Active Sessions & Audit Log** — see who is logged in and the full trail of actions.
- **Database Backup** — back up the system database.
- **HR Integration & Business Central** — connect Apex POB to SeamlessHR and Microsoft Business Central.

10. Notifications & Alerts

The bell icon at the top of the screen shows live notifications as they happen — you do not need to refresh. Typical alerts include visitor pre-registrations awaiting approval, visitor overstays, and emergency/mustering events. A number on the bell means items need your attention; click it to see the list.

11. Troubleshooting & Tips

If this happens...	Try this
The page won't load or looks broken	Hard refresh: Ctrl+Shift+R (Windows) or

	Cmd+Shift+R (Mac).
You were signed out unexpectedly	Your session expired for security — just sign in again.
A module is missing from your menu	Your role may not include it. Ask your administrator for access.
Numbers look out of date	Most screens refresh about every 30 seconds; you can also use the Refresh button.
Sign?in fails on a new web address	The address may need authorising on the server — contact your administrator.
A reader/device shows offline	Note it from Reader Status on the Dashboard and report it to your administrator.

Who to contact: For access, passwords, device faults or anything the system won't let you do, contact your Apex POB system administrator.

12. Quick Reference

Movement (punch) types

Type	Meaning
Check In	Person entered / arrived on site
Check Out	Person left / departed site
Break Out	Person stepped out temporarily (counts as off?site)
Break In	Person returned from a break

Visitor statuses

Status	Meaning
Pending	Awaiting host approval
Approved	Cleared to visit
Rejected	Not approved
Checked In	Currently on site
Checked Out	Visit finished / left
Expired	Visit window passed without check?in

Muster / missing?person statuses

Status	Meaning
Missing	Not yet accounted for at muster
Alert	Overdue — attention needed
Search Ordered	A search sweep has been assigned
Critical	Missing for an extended time — highest priority

13. Glossary

Term	Definition
POB	Personnel On Board — everyone currently on site / on the platform.
Muster	The process of gathering everyone at assembly points to account for them.
Drill	A practice muster/emergency (not a real incident).
Host	The employee a visitor is coming to see.
Pre-registration	Booking a visitor in advance so approval and check-in are quick.
Zone	A defined area of the site with its own live headcount.
Reader / Device	A badge/biometric access unit that records entries and exits.
Overstay	A visitor still on site beyond their booked time window.
Blacklist	People barred from being admitted as visitors.
Manifest	A list of personnel on board at a point in time.
Crew change	Personnel mobilising to, or demobilising from, site.
Rotation	A person's scheduled time on site before they are due to rotate off.

— End of Manual —
